SUMMARY

Full-stack Software Engineer with **2+ years** owning delivery from BA specs through implementation, testing and release across **web, mobile and backend**.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, Python, SQL

Backend: Spring Boot, NestJS, Node.js/Express, FastAPI, TypeORM, REST, JWT/OAuth

Frontend & mobile: React, Android (Java), Flutter, Expo/React Native, Tailwind CSS

Data & tools: SQL Server, MongoDB, Redis, Docker, Git, Google Sheets API

EXPERIENCE

Software Engineer

Oct 2024 – Present

Net Viet Software Solutions

HCMC, Vietnam

- Shipped **690+** commits across **8 production repositories (Android/Java, Flutter, React, Spring Boot, Python)**, owning modules end-to-end from BA specs through implementation, QA, and release.
- Manufacturing Execution System** (Android, Java, SQL Server): built and maintained warehouse and quality-control modules — goods export/receipt/delivery slips, packing confirmation, and multi-step inspection wizards for **3** production checkpoints with automatic **AQL** grading, defect photo capture, and digital signatures.
- Improved performance and data integrity on the same system: migrated hard-coded SQL to **stored procedures**, added **connection pooling**, eliminated **N+1** queries, moved barcode processing to background threads, and introduced atomic-flag/queue guards and uniqueness constraints to remove race conditions and duplicate records during concurrent shop-floor scanning.
- Executive BI dashboard platform (React 19/React Router 7/TypeScript/Tailwind + Spring Boot/JPA/SQL Server)**: sole developer of **7** responsive analytics dashboards and their backend APIs; refactored the service into a **hexagonal, feature-based** architecture with **JWT** auth and **Docker** deployment.
- RFID production tracking (Flutter + Spring Boot)**: implemented custom RFID tag decoding and the mapping pipeline linking tags to production orders and plans, with multi-layer quantity validation, cumulative output metrics, and instant-messaging alerts; added the **GitLab CI** pipeline for the feature branch.
- Automated reporting by building a **Python** service (sole owner) that syncs **SQL Server** records to **Google Sheets** on a scheduler, replacing manual exports with near-real-time refresh for ops teams.

SIDE PROJECTS

TripBlogger (*Expo/React Native, NestJS, SQL Server, Redis*) — full-stack travel platform: JWT/OAuth, Socket.IO realtime feed, marketplace MVP. [GitHub](#)

pet_store (*FastAPI, Express.js, React, MongoDB*) — e-commerce app with an ONNX/YOLO service classifying 37 pet breeds. [GitHub](#)

EDUCATION

Ton Duc Thang University

Bachelor — Computer Networks and Data Communications

HCMC, Vietnam

2021 – 2025
