

LUU MINH NHIEU

+84 389 145 080 | minhnhieu50@gmail.com | linkedin.com/in/nhieu-minh | github.com/So-Much

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, Python, SQL

Backend: NestJS, Spring Boot, Node.js/Express, FastAPI, TypeORM, REST, JWT/OAuth

Frontend & mobile: React, Expo/React Native, Flutter, Android (Java), Tailwind CSS

Data & tools: SQL Server, MongoDB, Redis, Socket.IO, Docker, Git, Jest

PROJECTS

TripBlogger | *NestJS, Expo/React Native, TypeScript, SQL Server, Redis, Socket.IO* | [GitHub](#) Personal, 2026

- Architected an **npm-workspaces monorepo** (NestJS API, Expo app, shared package) where a **zero-dependency itinerary engine** runs identically on server and client, keeping optimistic UI from drifting from server results.
- Built the API as a modular monolith: **15** domain modules, **120** REST endpoints, **43** **TypeORM** entities on **SQL Server**, **20** migrations and **10** idempotent seed scripts.
- Secured it with **JWT** access/refresh **rotation** (bcrypt-hashed, device-scoped tokens revoked by **jti**), **Google** ID-token verification, guest sessions, role/status guards and tiered rate limiting.
- Wrote the day scheduler reporting **3** conflict classes over a custom **OSM opening-hours parser**; integrated **4** geo providers (OSRM, Overpass, Photon, Nominatim) with failover and **geohash**-keyed **Redis** caching.
- Delivered a **JWT-authenticated Socket.IO** gateway patching the **TanStack Query** cache in place, plus commerce (cart, guest checkout, COD, **6**-state orders, coupons) with atomic stock decrements and **247** unit tests.

pet_store | *FastAPI, ONNX Runtime, YOLOv8, Express.js, MongoDB, React, Tailwind* Team of 2, 2024

- Fine-tuned a **YOLOv8m-cls** model on a self-labelled **37**-breed dataset, exported it to **ONNX** and served CPU inference from a **FastAPI** microservice behind a **0.8** confidence gate.
- Closed the ML-to-business loop: predicted breed plus pet age drives product recommendations, and every accepted or rejected upload is stored per user as retraining data.
- Built the **Express.js/MongoDB** backend — **26** REST endpoints, **JWT** with **Passport** local and **Google OAuth2** — with **4**-tier **RBAC** on **20** endpoints via a middleware factory with privilege-escalation checks.

EXPERIENCE

Software Engineer Oct 2024 – Present

Net Viet Software Solutions

HCMC, Vietnam

- **690+** commits across **8** production repos — **Android/Java, Flutter, React, Spring Boot, Python** — owned from BA specs to release.
- Migrated hard-coded SQL to **stored procedures**, added **pooling**, fixed **N+1** queries and shop-floor race conditions.
- Sole developer of a **BI platform**: **7** dashboards + APIs, **hexagonal** architecture, **React 19/Spring Boot**.

EDUCATION

Ton Duc Thang University

Bachelor — Computer Networks and Data Communications

HCMC, Vietnam

2021 – 2025
